

MONGODB

# Build the next big thing

The developer data platform that provides the services and tools necessary to build distributed applications fast, at the performance and scale users demand.

→

A large, dark blue, curved shape that starts from the left edge, curves upwards and then downwards, forming a wide, shallow 'U' or 'C' shape that spans most of the width of the slide. It serves as a background for the main text.

# Built by developers, for developers

# The document data model maps to how you think and code.

## Model

Break out of rigid, tabular data structures with flexible documents that map directly to objects in your code. Embed related data into a single document to increase performance and minimize computational cost.

## Query

## Optimize

**1-to-1**

1-to-Many

Many-to-Many

```
0      # Model one-to-one
1      relationships with
2
3      # embedded documents

## Operational Workloads

Optimize write performance with a document data model that maps to your application's access patterns. Meet a wide range of query requirements via a single query API that supports everything from simple lookups to complex processing pipelines for data analytics and transformations.
